Q-STATION sQuare train STATION

CALL: MOBILITY FOR GROWTH

TOPIC: low carbon and sustainable transport

The project, in partnership with the Italian Railways Network and the Ministry of Transport, aims to lower the tracks and cover the cut of track with a square.

Delocalize the power station in a remote area of the inhabited center with the aim of eliminating noise pollution, clearing up the city's gap and the interruption of the road by the tracks and pushing the trellises away from the center of the city giving to the city a more attractive aspect.

A consortium will be organized with the “RETE FERROVIARIA ITALIANA” , MUNICIPALITY OF TERMOLI and MINISTRY OF TRANSPORT with whom a round table will be done in December to establish the road map.

Members of the Consortium will have the role of coordination of action and they will be in charge for the selection of the private part to be included in the project.

Specific objectives

- The specific objective of the project is **reconnect the urban area** that is divided from the line of the tracks. It will be a strategic work that will **change the urban layout, improve the level of electromagnetic pollution, will keep the station in the center of the city (Termoli).**

THANK YOU FOR YOUR KIND ATTENTION
