ViaSat H2020 Project name	Year	Topic
SANSA	2015	5G
Skyopener	2015	Aerial Autonomous Vehicles
Sapiens	2015	Aerial Autonomous Vehicles
Camelot	2016	Autonomous vehicles Air, Sea, Land
Other European projects	Year	Topic
For EMSA (Maritime Surveillance Agency)	2017	Drone as a service traffic Vessel Monitoring ...

Project idea on CALL: AUTOMATED ROAD TRANSPORT

Mobility for growth MG-2.4 Innovative applications of drones for safety in transport

Monitoring (surveillance) of large vehicles, vessels, air vehicles, transport infrastructures, transport operations and users in nominal and contingency procedures (SAR)

- Drone application for
 - road traffic monitoring,
 - law enforcement,
 - dangerous good transportation,
 - fight against drug trafficking ...
- Wide surveillance system based on Drones along motorways
 - Persistent surveillance system
 - making use of a network of Drones (Swarm), collaborative tasking of Drones,
 - real time information management (transport and real time video analytics / processing;
 - abnormal behavior, detection, instant situation awareness on a region
 - Communication network and cloud service application
- Current consortium : ViaSat + UAV manufacturer
- Profile of the partners sought : video analytics / processing solution providers, Drone task coordination , SW engineering
