

# L'impact à l'échelle du programme- cadre

## Suivi et analyse de l'impact d'Horizon Europe

15 Octobre 2019

Nelly Bruno, Commission Européenne  
DG Recherche et Innovation (DG RTD-A2)

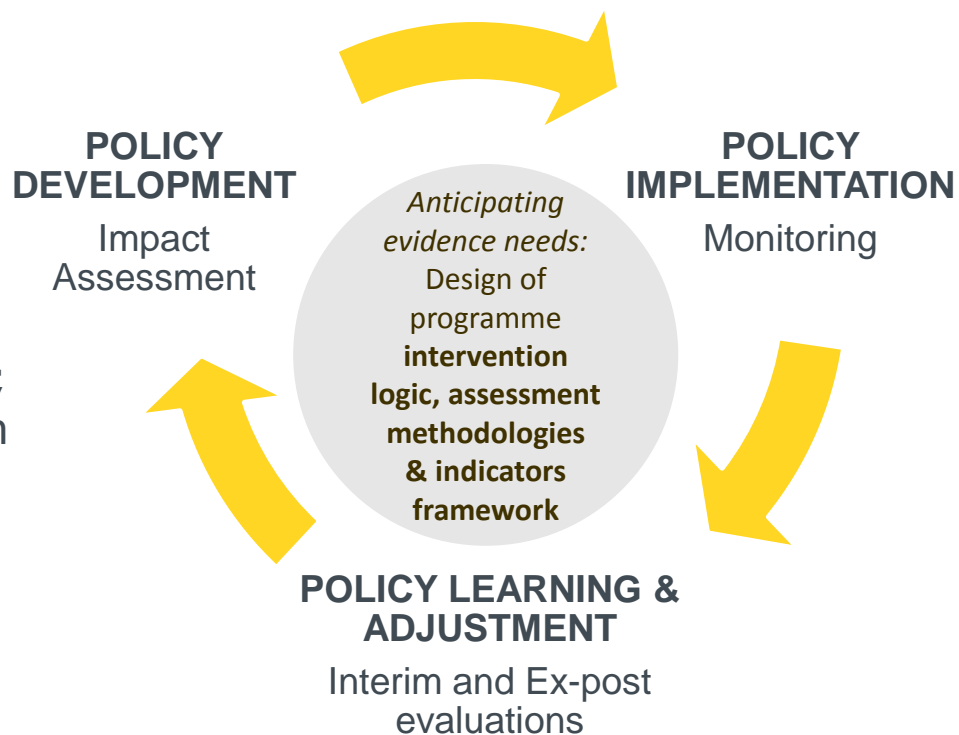

# 1. INTRODUCTION

- **Context** of Horizon Europe proposal: socio-economic pressures, budgetary austerity
- Need to demonstrate and communicate **why** EU investments in research and innovation matter
- Aim to **maximize impact** of the Framework Programme: incl. Programme structure based on a more systemic approach; Clusters ; Missions; EIC; Rationalised approach to European Partnerships; Synergies; Efficient implementation
- **Key Impact Pathways** as backbone of Horizon Europe indicator framework (Art. 45 & 47, Annex V)
- Need to **reconcile** policy needs with methodological challenges

## Better regulation agenda

‘Make sure every action delivers maximum performance & value added’

## 2. THE CHALLENGE OF CAPTURING R&I IMPACTS

- **Better Regulation:** evaluations to look not only at what happened, but also *why* and *how much* with evidence of causality
- Evaluations are needed to inform the policy cycle (cannot wait 25 years to know what works or not) but they also need to be informed
- Specific challenges of R&I programmes evaluations:
  - **Uncertainty and risk:** need risk taking, trials and errors, role of public intervention when markets fail, what to measure
  - **The time lag issue:** possibly very long timeframe before impact occurs, when to measure
  - **The attribution/contribution problem:** nature of knowledge (non-rival, cumulative), other projects running, R&I systems influence
- Particularly difficult when it comes to measure outputs/results/impacts

### 3. LEARNING FROM OTHER INDICATORS FRAMEWORKS

- **No one-fit-all solution** (Graham et al., 2018): mainly accountability/ advocacy purpose (more quantitative, comparable) than learning
- Traditionally two main areas of indicators on outputs side: 1) scientific **publications** and citations; 2) **patent** applications, awards and citations
- NOW (van den Besselaar, Flecha, Radauer, 2018) turning to **economic impact** data (jobs, turnover), but other types of IPR rather unused, missing data links on market reach of innovations
- Most agencies and models do not consider **societal impact** from R&I at all. Some attempts with indicators *leading* to societal impact (SIAMPI)

## 4. LEARNING FROM PAST FRAMEWORK PROGRAMMES

- Since 1984, **multiple evaluations of FP:** different approaches, inadequate timing, limited data, difficulty to capture wider effects
- Evolution for Horizon 2020: **Key Performance Indicators**
- **Horizon 2020 Interim evaluation:** triangulation of data, long-term impact of FP7, 3 categories of impact, counterfactual analysis on research outputs, econometric modeling on jobs & growth
- But **limitations:** data availability, reliability, aggregation; lack of benchmarks and baselines; attribution/contribution

- **Need to tell the difference EU funding is making:** for the FP as a whole, according to its objectives
- **Need to set realistic** indicators to track progress in **short, medium and long term**
- **Need to further simplify & minimise burden** on participants
- **Need to distinguish** between management data & impact indicators

# 5. EVOLUTION FOR HORIZON EUROPE

## Horizon 2020 system

- 3 headline indicators **not directly attributable** to the programme\*
- **55 Horizon 2020 Key performance and Cross-Cutting issues** indicators:
  - 27 are related to **management and implementation data** (e.g. funding, participation)
  - 28 are related to **outputs, results or impacts**, out of which:
    - none is related to the whole programme (covering only programme parts)
    - 9 relate to publications
    - 7 relate to intellectual property rights and innovations
    - 4 relate to leveraged funding
    - 4 relate to researchers' mobility and access to infrastructures
- Strong reliance on self-reporting by beneficiaries or surveys

## Evolution for Horizon Europe

- All Horizon 2020 indicators related to outputs, results and impacts are maintained but **streamlined and further specified** to cover the whole Programme
- Management and implementation data are still collected and made available in close-to-real time through **online Dashboard** but are not part of "impact indicators"
- Key indicators are set at **Programme level** according to the Programme objectives and are attributable to the Programme
- Programme objectives are tracked according to **nine key impact pathways**, through short, medium and long term indicators – for more accurate reporting over time including via the Dashboard
- Higher reliance on external data sources, qualitative data and automated data tracking to **minimise burden on beneficiaries**
- Possibility for programme part or action specific indicators (but not in the legal base)

## 6. TRACKING IMPACT IN HORIZON EUROPE – ‘PATHS’ PRINCIPLES

- **P**roximity - Knowing who the individual researchers and companies are, for example through unique identifiers such as VAT numbers, researchers IDs, funder ID
- **A**tribution – Microdata collection supporting the identification of control groups for counterfactual analysis
- **T**raceability – Minimised burden on beneficiaries through automatic data harvesting from existing databases; use of additional primary (including qualitative) data sources such as project evaluators and reviewers
- **H**olism - Telling the story of the progress of the Programme as a whole according to the objectives, at any moment in time
- **S**tability - Building on the current systems, piloting evolutions in Horizon 2020

This requires:

- Adaptations of current **templates** and forms, while simplifying
- **Piloting and testing new approaches**, e.g. for accessing microdata on businesses, and for tracking societal impact

# 7. TRACKING IMPACT IN HORIZON EUROPE

## THREE TYPES OF IMPACT BASED ON OBJECTIVES

### Scientific impact

Promote scientific excellence, support the creation and diffusion of high-quality new fundamental and applied knowledge, skills, training and mobility of researchers, attract talent at all levels, and contribute to full engagement of Union's talent pool in actions supported under the Programme

### Societal impact

Generate knowledge, strengthen the impact of R&I in developing, supporting and implementing Union policies, and support the uptake of innovative solutions in industry, notably in SMEs, and society to address global challenges, inter alia the SDGs

### Economic/Technological impact

Foster all forms of innovation, facilitate technological development, demonstration and knowledge transfer, and strengthen deployment of innovative solutions

# 8. TRACKING IMPACT IN HORIZON EUROPE

## NINE KEY IMPACT PATHWAYS TO TRACK PROGRESS OVER TIME

1. Creating high-quality new knowledge

2. Strengthening human capital in R&I

3. Fostering diffusion of knowledge and Open Science

**Scientific  
Impact**

4. Addressing EU policy priorities & global challenges through R&I

5. Delivering benefits & impact via R&I missions

6. Strengthening the uptake of R&I in society

**Societal  
Impact**

7. Generating innovation-based growth

8. Creating more and better jobs

9. Leveraging investments in R&I

**Economic/  
Technological  
Impact**

# Pathway 1. Creating high quality new knowledge

**STORY LINE:** The FP creates and diffuses high quality new knowledge, as shown by the high-quality publications that become influential in their field and worldwide.

## Indicator (short, medium, long-term)

**Data needs:** Identification of publications co-funded by the FP through the insertion of a specific funding source ID when publishing, allowing follow-up tracking of the perceived quality and influence through publication databases and topic mapping.

# Pathway 4. Addressing EU priorities & global challenges through R&I

**STORY LINE:** The FP helps addressing EU policy priorities (including meeting the SDGs) through research and innovation, as shown by the portfolios of projects generating outputs contributing to tackling global challenges.

**Portfolio-level EXAMPLE:** After 3 years, from all projects pursuing reduction of CO2 emissions, 8% already produced relevant innovations and scientific results. After 5 years, experts estimate that all achieved solutions together can contribute to a reduction of CO2 emissions of 0.1% based on current market & policy trends

## Indicator (short, medium, long-term) - for each identified priority

Typically  
As of YEAR 1+

Number and share of outputs aimed at addressing specific EU policy priorities & global challenges (including SDGs)

Typically  
As of YEAR 3+

Number and share of innovations and scientific results addressing specific EU policy priorities & global challenges (including SDGs)

Typically  
As of YEAR 5+

Aggregated estimated effects from use of FP-funded results on tackling specific EU policy priorities & global challenges (including SDGs) including contribution to the policy and law-making cycle (such as norms and standards)

**Data needs:** Projects classified according to specific EU policy priorities pursued (including SDGs) and follow-up tracking of their outputs, results & impacts. Portfolio analysis on effects from scientific results & innovations in specific EU policy priority/SDGs areas, text mining.

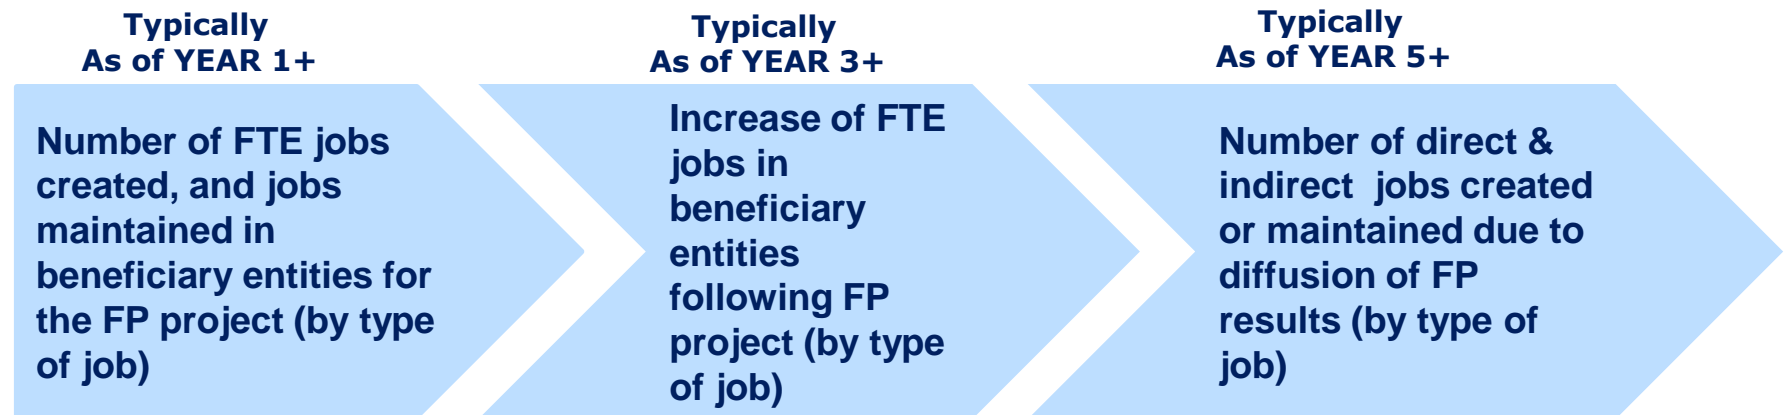

# Pathway 7. Creating more & better jobs

**STORY LINE:** The FP generates more and better jobs, initially in the projects, and then through the exploitation of the results and their diffusion in the economy.

**Counterfactual EXAMPLE:** After 3 years, on average, a company that participates in Horizon Europe has created 1,5 more jobs than a similar company not participating.

## Indicator (short, medium, long-term)

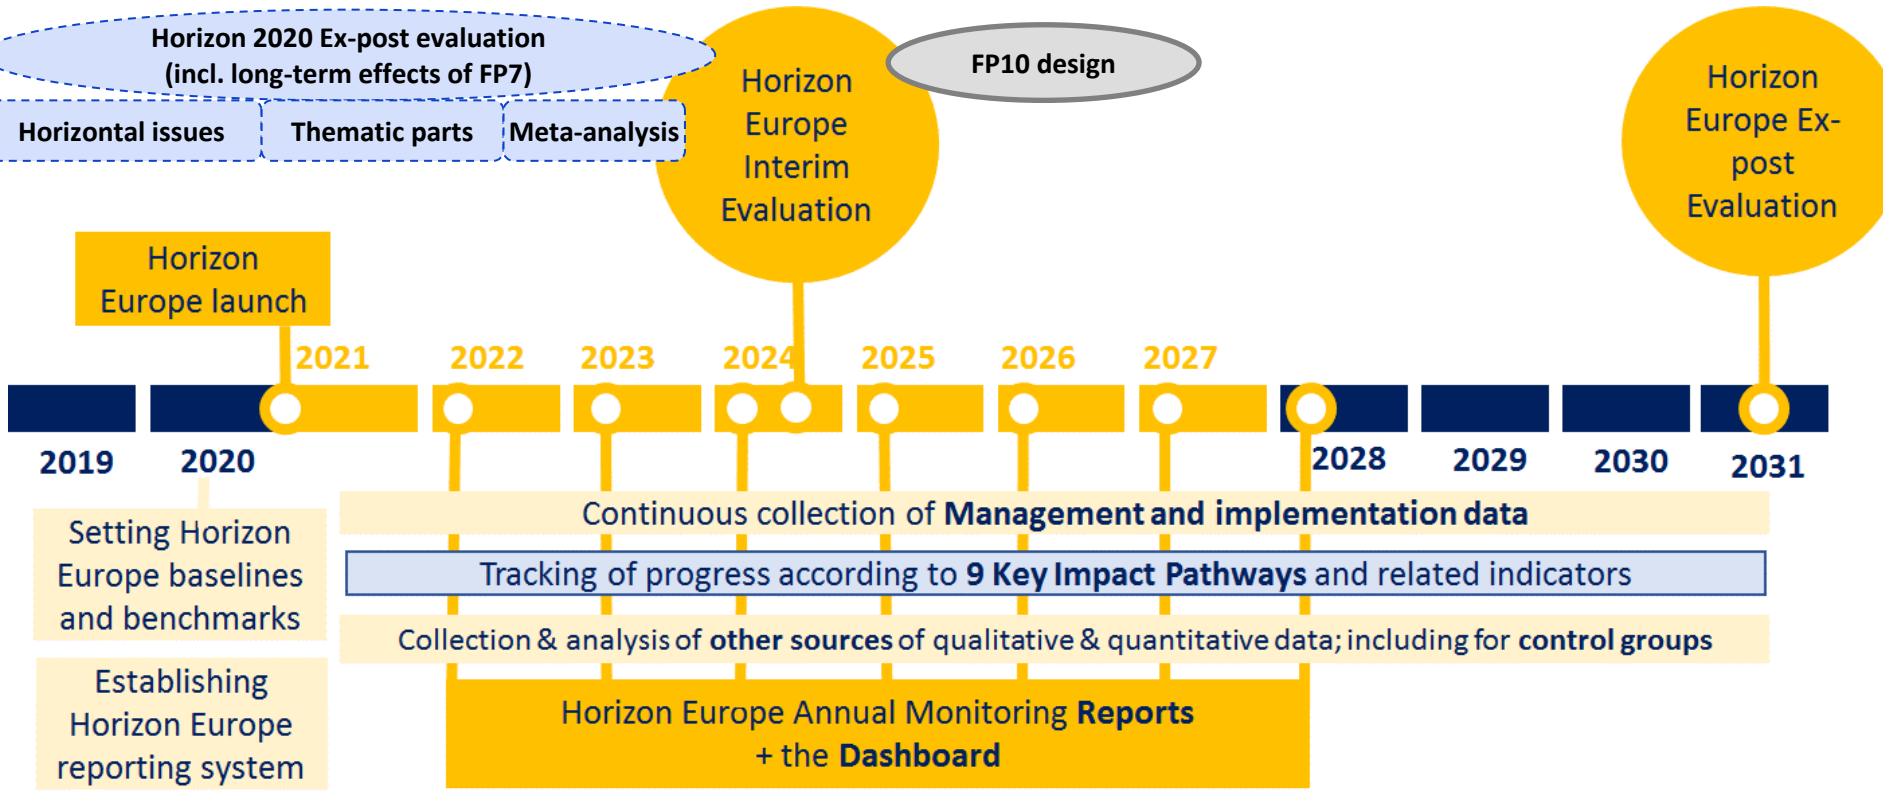

**Data needs:** Collection of information on individuals involved in FP projects, including their workload (Full Time Equivalent) and job profile allowing follow-up tracking of employment in beneficiary organisations. Longer-term indicator to be estimated based on dedicated study.

## 9. MEETING THE DATA NEEDS

- Building on Horizon 2020 but **streamlining**
- Relying much more on **microdata** and where possible unique persistent **identifiers** (researchers, companies, funder ID), allowing data **disambiguation and disaggregation**
- Further **simplifying** and minimizing the reporting burden on beneficiaries (data linking)
- Providing a solid basis for accountability, for **evaluations** to dive deeper into learning and identifying policy adjustments
- **Continuous process of evaluation and monitoring:** Interim evaluation to focus on relevance, coherence, efficiency + longer term assessment of past programmes for effectiveness/impact
- **Monitoring Flashes** on topical issues to analyse evidence on the go

# 10. MONITORING & EVALUATION FRAMEWORK

## 12. CONCLUSIONS

Key Impact Pathways **novel, ambitious yet pragmatic** approach to reconcile policy needs with impact measurement challenges under Horizon Europe

Shall allow to **better communicate** the progress of Horizon Europe towards its objectives around a set of key storylines while managing expectations on what can be reported when

Shall allow to **better capture** the progress made by focusing on microdata collection and data linking, acknowledging multiple impacts of R&I investments as well as early identification of potential barriers or drivers to impact, while supporting simplification and data quality

A key element for improving the quality of programme **evaluations**, and their usefulness for **policy learning** and **policy design**

# ANALYSING ON THE GO - MONITORING FLASHES FROM HORIZON 2020 TO HORIZON EUROPE

Monitoring flash reports “From Horizon 2020 to Horizon Europe” are available here:

[https://ec.europa.eu/info/publications/horizon-2020-monitoring-flash\\_en](https://ec.europa.eu/info/publications/horizon-2020-monitoring-flash_en)

#1 Country Participation

#2 Dynamic Network Analysis

#3 International Cooperation

... To continue

**FROM HORIZON 2020 TO HORIZON EUROPE MONITORING FLASH**  
#1.2 COUNTRY PARTICIPATION  
August 2018

This Monitoring Flash is based on monitoring data of Horizon 2020 – the European Framework Programme for Research and Innovation 2014-2020 – and its predecessor, the Seventh Framework Programme (FP7). Widening participation is monitored regularly as a cross-cutting issue across Horizon 2020. This analysis covers the applications and participations from entities located in the different participating countries for the first 4.5 years of Horizon 2020 implementation. However, most Horizon 2020 projects are implemented by consortia of partners from different countries, and they generate a European added value that goes beyond each country. This European added value is not captured by looking specifically at the country of origin of the applicants and participants.

**HORIZON 2020 - 4.5 YEARS OF IMPLEMENTATION**  
Key overview data

€33.1b	19 292	11.9%	88 374	27 355
of EC contributions allocated to signed grants	grants signed from 100 146 proposals	of proposals successful	participations in signed grants	distinct participants from 146 countries

**COUNTRY PARTICIPATION IN HORIZON 2020**  
Evolving heterogeneity

- Compared to the previous Framework Programme (FP7) the share of EU funding going to 'EU13' countries has already increased from 4.2% to 4.8% in Horizon 2020. This is proportionate to their share in the EU wide investments in research and development (RD) (4.4%). The share of applications from EU13 entities has also slightly increased from 5.6% in FP7 to 10% in Horizon 2020 but this remains relatively low compared to their share of the EU's scientists and engineers (17%). There are also indications that an increasing share of Horizon 2020 multi-beneficiary projects are involving at least one EU13 participant, reversing a downward trend observed under FP7.
- Different country groupings conceal noticeable performance differences among Member States and across Horizon 2020 programme parts. Some EU13 countries perform better than some EU15 countries in the 2018 European Innovation Scoreboard, and/or have a relatively high number of applications compared to their population of scientists and engineers. At the same time, some EU15 countries score poorly in the Scoreboard and/or have a relatively low participation in Horizon 2020. Data overall still shows that the more a country invests nationally in its RD capacity, the more funding from the Programme it receives.

EU15 Member States are marked in Bulgaria, Cyprus, Czech Republic, Estonia, Hungary, Latvia, Lithuania, Malta, Poland, Romania, Slovakia and Slovenia, whereas EU13 countries are the other 13 Member States of the European Union.

# Thank you!

# ANNEX

# Pathway 1. Creating high quality new knowledge

*STORY LINE: The FP creates and diffuses high quality new knowledge, as shown by the high-quality publications that become influential in their field and worldwide*

## ▪ Indicator (short, medium, long-term)

*Data needs: identification of publications co-funded by the FP through the insertion of a specific funding source ID when publishing, allowing follow-up tracking of the perceived quality and influence through publication databases and topic mapping.*

## Pathway 2. Strengthening human capital in R&I

*STORY LINE: The FP strengthens human capital, as shown by the improvement in skills, reputation and working conditions of participants*

### Indicator (short, medium, long-term)

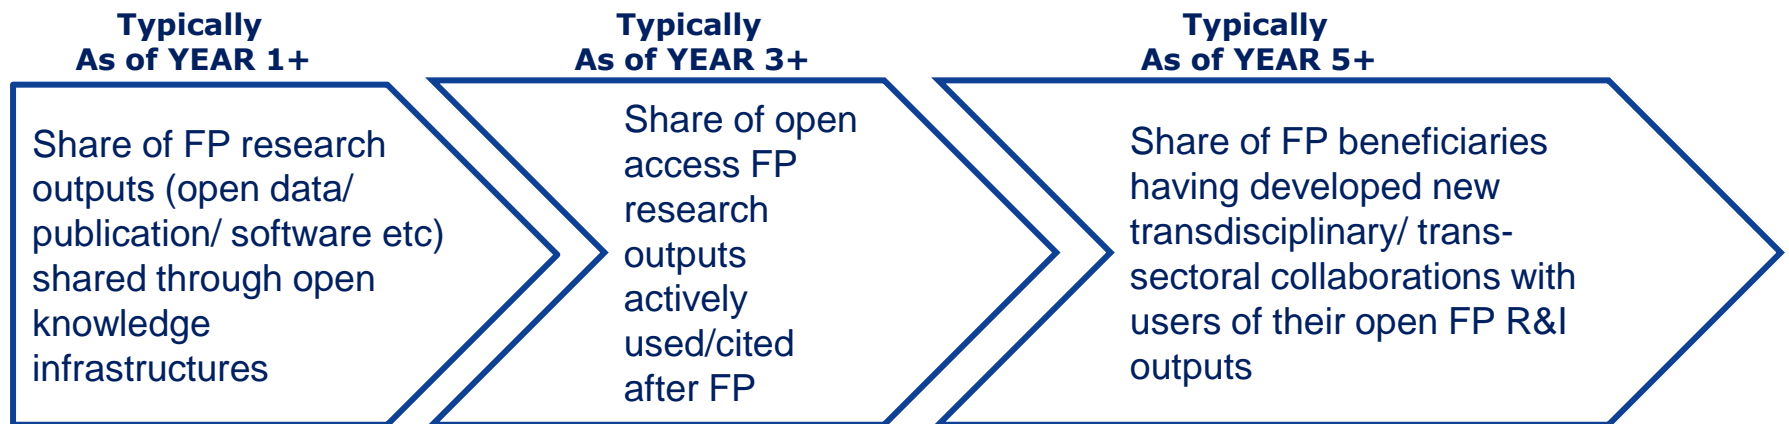

*Data needs: collection of unique identifiers of individual applicants to the FP, allowing follow-up tracking of their influence in their field through publication and patent databases, awards and prizes, as well as evolution of working conditions through salary levels and benefits*

## Pathway 3. Fostering diffusion of knowledge and Open Science

*STORY LINE: The FP opens up science, as shown by research outputs shared openly, re-used and at the origin of new transdisciplinary/trans-sectoral collaborations*

### Indicator (short, medium, long-term)

*Data needs: Identification of research outputs (esp. publications & research data) co-funded by the FP through the insertion of a unique identifier for FP funding when publishing or sharing openly (e.g. OA journals/platforms (publications) and open FAIR repositories (data)), allowing follow-up tracking of open access performance in terms of active use/citations and collaborations.*

# Pathway 4. Addressing EU priorities & global challenges through R&I

*STORY LINE: The FP helps addressing EU policy priorities (including meeting the SDGs) through research and innovation, as shown by the portfolios of projects generating outputs contributing to tackling global challenges*

## Indicator (short, medium, long-term)

Multidimensional:  
for each identified  
EU priority

Typically  
As of YEAR 1+

Number and share of outputs aimed at addressing specific EU policy priorities & global challenges (including SDGs)

Typically  
As of YEAR 3+

Number and share of innovations and scientific results addressing specific EU policy priorities & global challenges (including SDGs)

Typically  
As of YEAR 5+

Aggregated estimated effects from use of FP-funded results on tackling specific EU policy priorities & global challenges (including SDGs) including contribution to the policy and law-making cycle (such as norms and standards)

*Data needs: Projects classified according to specific EU policy priorities pursued (including SDGs) and follow-up tracking of their outputs, results & impacts. Portfolio analysis on effects from scientific results & innovations in specific EU policy priority/SDGs areas, text mining.*

# Pathway 5. Delivering benefits and impacts through R&I missions

*STORY LINE: The FP produces knowledge and innovation that contribute to achieving missions of EU interest.*

Multidimensional:  
for each identified  
mission

## Indicator (short, medium, long-term)

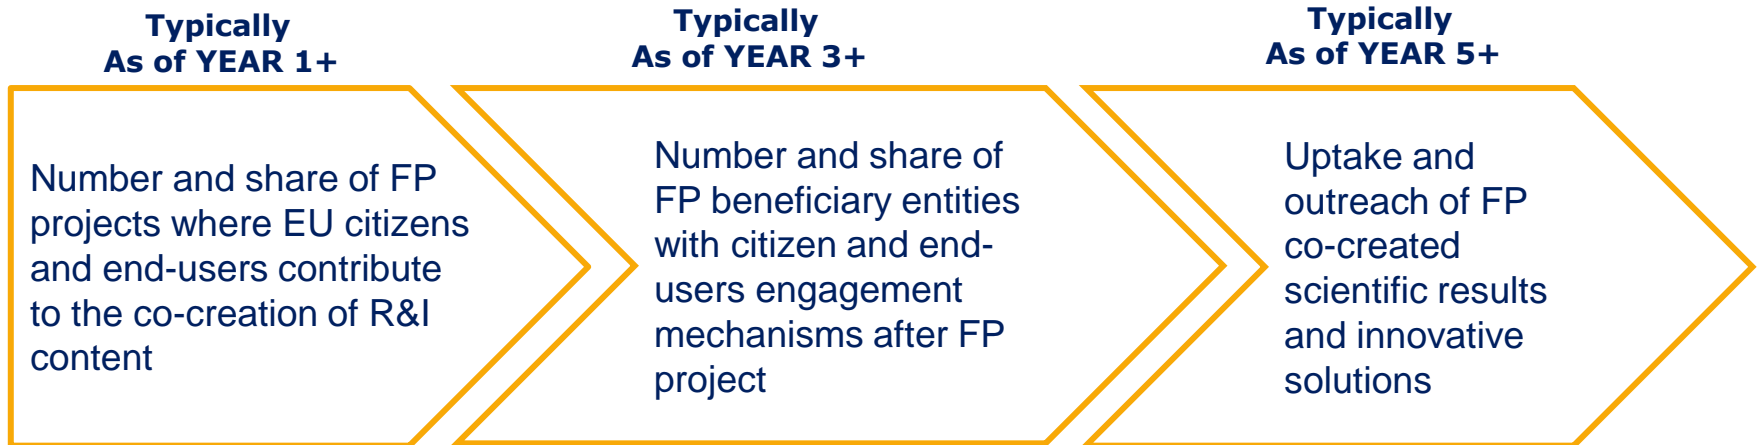

*Data needs: Projects classified according to the missions pursued and follow-up tracking of their outputs, results and impacts according to the target set. Portfolio analysis on effects from scientific results & innovations in mission areas.*

# Pathway 6. Strengthening the uptake of innovation in society

*STORY LINE: The FP strengthens the uptake of innovation in society, as shown by the engagement of citizen in the projects and beyond the projects by improved uptake of scientific results and innovative solutions*

## Indicator (short, medium, long-term)

*Data needs: Collection of data at proposal stage on the roles of partners (incl. citizen) in the projects, structured survey of beneficiary entities and tracking of uptake and outreach through patents and trademarks and media analysis.*

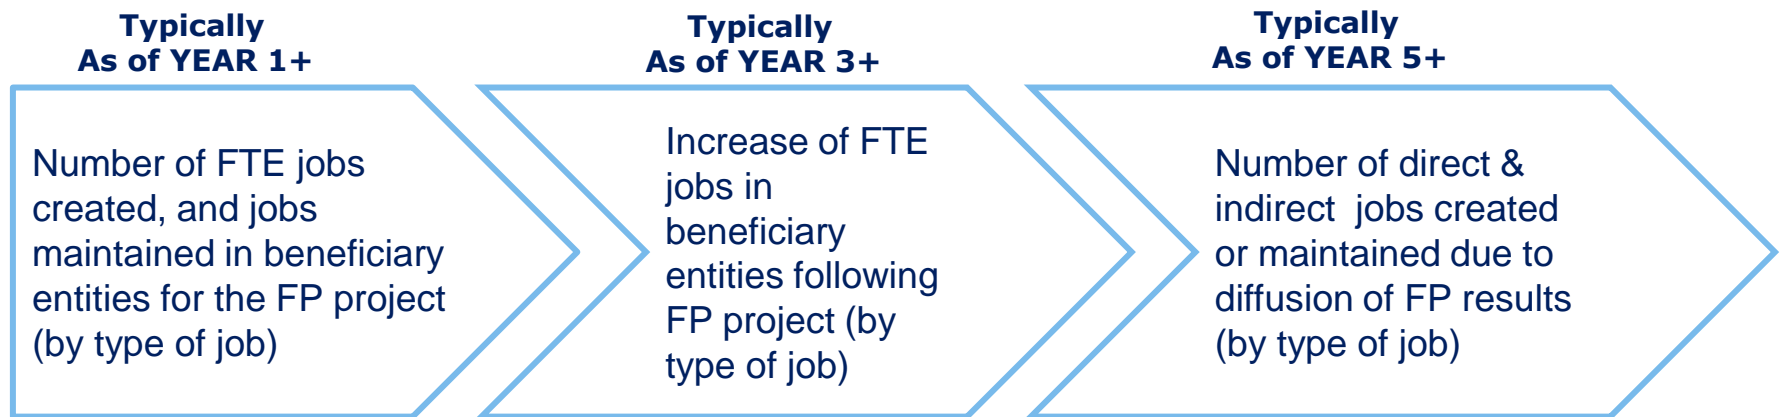

# Pathway 7. Creating more & better jobs

*STORY LINE: The FP generates more and better jobs, initially in the projects, and then through the exploitation of the results and their diffusion in the economy*

## Indicator (short, medium, long-term)

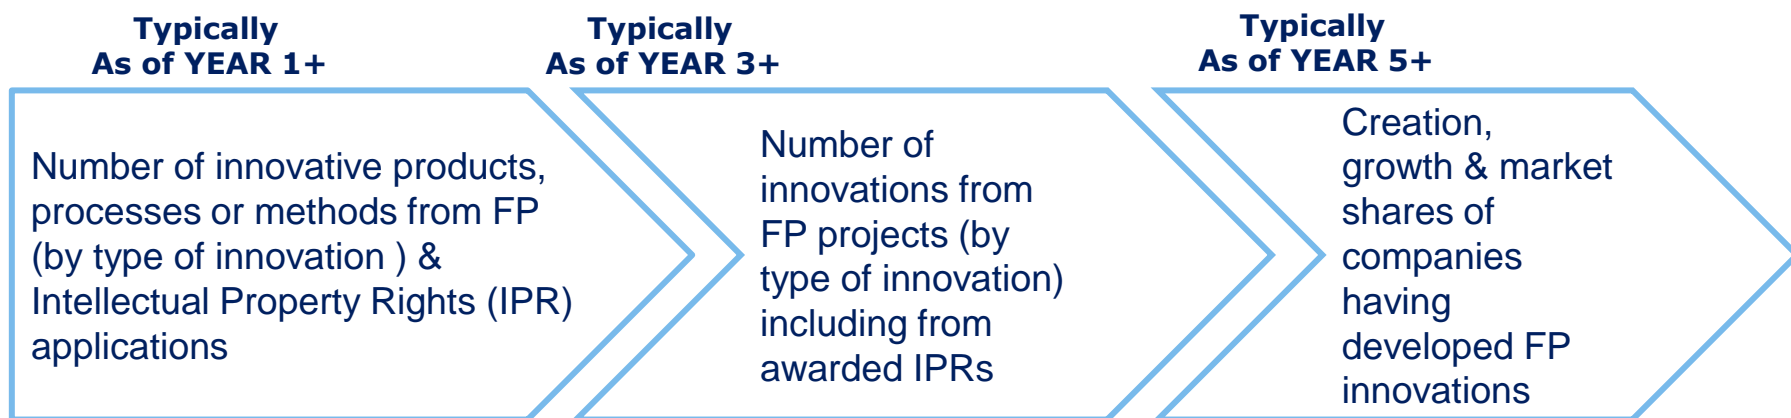

*Data needs: Collection of information on individuals involved in FP projects, including their workload (Full Time Equivalent) and job profile allowing follow-up tracking of employment in beneficiary organisations. Longer-term indicator to be estimated based on dedicated study.*

# Pathway 8. Generating innovation-based growth

*STORY LINE: The FP is a source of economic growth, as shown by the patents and innovations that are launched on the market and generate added value for businesses*

## Indicator (short, medium, long-term)

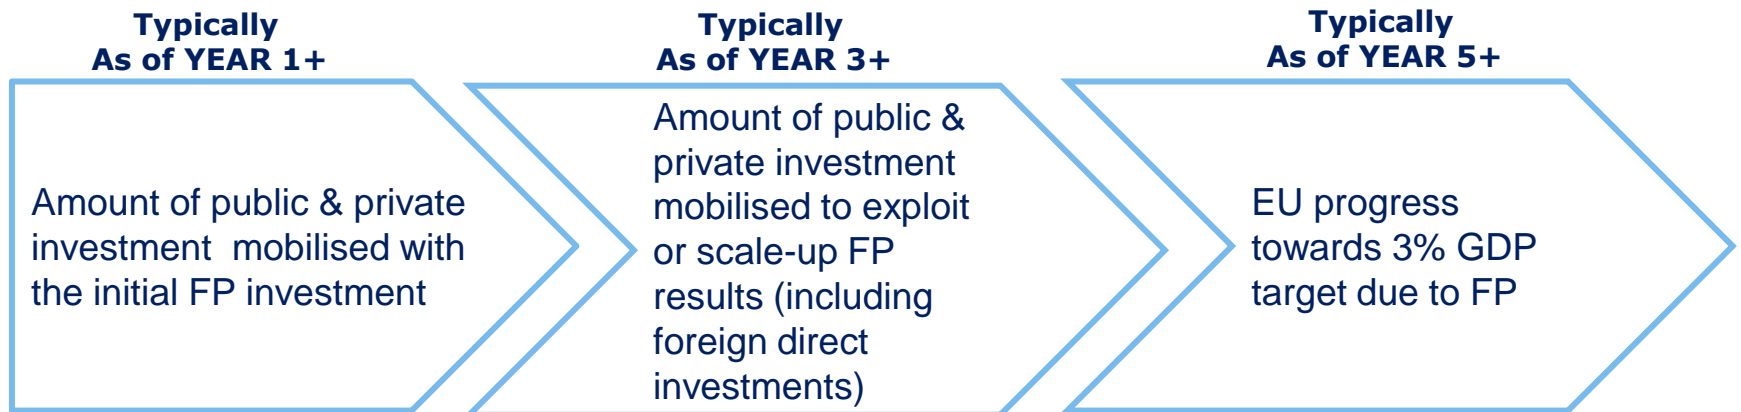

*Data needs: Reporting of beneficiaries on innovative products, processes or methods from FP and their practical use, and insertion of a specific funding source ID when filling IPR applications, allowing follow-up tracking of the patents through patent databases & trademarks.*

# Pathway 9. Leveraging investment in R&I

*STORY LINE: The FP is leveraging investments for research and innovation in Europe, initially in the projects, and then to exploit or scale-up their results*

## ▪ Indicator (short, medium, long-term)

*Data needs: Data on co-funding in FP projects by source of funds including other EU funds, collection of unique identifiers of applicants to the FP (e.g. VAT), allowing follow-up tracking of their capital. Longer-term indicator to be estimated based on dedicated study.*
