SEC-10-FCT-2017	Y

Competencies

- *Santé Publique France is the French governmental agency in charge of surveillance, alert and crisis response, education and prevention in the public health field. 700 people strong, mostly in the Paris area but with 22 branches all over the French territory including overseas*
- *Organization competencies : data mining, crisis response plan implementation*
- *Organization experience in European projects : cooperation with European partners such as the ECDC (European Center for Disease Control), some former personal experience in FP7/H2020 as LEAR*
- *The skills you can bring : data analysis, geographic sites including overseas territories, real-life experiences in secure access of restricted health data*

Project idea

- *Santé publique France :*
 - **Uses sensitive and personal health data for critical health analysis**
 - **Needs to protect and trace access to this data (strong authentication, enforcing CNIL/GDPR regulations)**
 - **Can share or exchange (big)data with European partners, scientists, eventually citizens**
 - **But data protection and tracing must be unintrusive**
- *List of the complementary skills you need for your consortium*
 - **We are looking for innovative solutions enabling us to protect, trace and easily use our data**
 - **We are willing to join an existing consortium on this kind of topic**
