Targeted topic

FCT02 - Technologies to enhance the fight against
crime and terrorism

Open Subtopic

Competencies

- Software development and Machine Learning (AI)
- Solid multi-disciplinary scientific background
- Previous experience participating in Marie Curie Actions, and applying for SME Instrument
- Academic & professional network/partnerships in Forensic Science
- Successful proof of concepts during our PhDs

Suggested project

- **FEATURE - Forensic Evidence Assessment Using REliable** machine learning
- Objective: to apply reliable AI to the analysis of forensic evidence
 - Fingerprints, skeletal remains, gait analysis
- Our role: organising the data and developing Machine Learning algorithms
- Existing partnerships: Universities involved with forensic research; established contact with several police forces
- Looking for:
 - Universities and forensic labs who can contribute to the data collection
 - forensic practitioners to test and provide feedback on our products
 - experts who can develop and refine the legal & ethics framework
