- **LC – SC3 – EE – 2 – 2018-2019 : Integrated home renovation services**

- Quick description of the project

To achieve the goal of 500 000 successful renovations per year set by the french law on 'Energy Transition for Green Growth', and as part of the La Rochelle Urban Community (LRUC) 'Zero Carbon Target by 2040' territorial strategy, a tremendous effort of energy renovation of the existing housing stock is needed. In LRUC the building sector represents 47% of energy consumption, and 24% of GHG emissions. The expected effort is largely based on homeowners or lessors of principal residences, since these represent 92% of the residential stock. Today, 500 houses per year are energetically renovated, but this number should increase to 2000 successful renovations per year (as to improve by at least 40% the performance of the building after works). The objective is to create a massification tool for the efficient energy renovation of the individual housing, the main challenge being to build and consolidate on the long-term the governance and local partnership by empowering local stakeholders on the issue of sustainable retrofitting of buildings. This will be done through the setting up and management of a **Local Energy Renovation Platform (ERP)** where all key stakeholders would be involved, from the home/building level to the district and city level.

- (*) Description of the expertise requested (up to 1000 characters)

We would like to **enter into an existing regional, national or european consortium of partners** willing to answer this call and work with a medium-size city which will develop exactly the integrated home renovation service described by the call, while purchasing high ambitious zero carbon targets by 2040. The Local Energy Renovation Platform is indeed a long term project, supported by many public and private local, regional and national actors (SMEs, NGOs, energy agencies, regional council, financial institutions, national housing agency...) which will ensure a strong partnership and large dissemination of the results.

- Keywords describing the expertise requested (up to 10 words)

- Energy transition / Home renovation Platform

Organisation information

Organisation and country: La Rochelle Urban Community, (CdALR) France

Type of organisation:

Enterprise SME Academic Research institute Public Body Other: Association

Former participation in FP European projects?

Yes No

Web address:
